(LISTED BELOW)

SUPPLEMENT TO
REPORT NC.

25X1X

1. The Balcescu Flour Mill was formerly known as the Valerianos and Lykiar-depoulos Mill.
2. Its production potential was between 200 and 240 tons of flour a day. Of this number 25 tons of white flour and 5 tons of "dark flour" were retained for local Braila consumption needs; the remainder was shipped out of the city to an unknown destination.
3. Also in operation in Braila was a smaller mill called Dumitrescu. This was capable of producing 15 tons of flour per day.
4. The former Violatos Mill (Moara Braila) was undergoing repairs which were expected to be completed by the end of September 1951. A Rumanian engineer, Constantin Dumitru, was in charge of the repair work. This mill is scheduled to turn out 200 tons of flour per day.
5. The informant states that atop the mill where he worked there were mounted two antiaircraft guns.
